Re AI & Marketing Analytics Manager

Date September 17, 2026

Spend that explains itself, and the AI that does the explaining

Dear hiring team, you are hiring someone to keep a live Claude operating model honest and to make marketing spend explain itself to a pipeline. Those are the same week for me, already.

At Audacy I carried a \$10M+ digital book in Denver and the argument that came with it: which channels moved buying stage, which were last-click theater, what we stopped funding. The framework I wrote is the one account executives defended in QBRs after I stopped sitting in them. A #19 market ranked top-3 nationally because the readouts were honest, not because the media plan was clever.

The other half I built. Elio routes across Claude, Gemini, GPT, Grok, and Llama on Cloud Run with grounded retrieval and live data connections, and the forecaster inside it ran 21 scenarios against \$2.4M of real pipeline. I hold the keys, the service accounts, and the schedules. That is the shape of 25 skills and 15 connections, and it is not prompting.

I would start by sitting in on one Demand Gen readout and tracing a single skill from the CRM to the sentence someone acts on. Power BI would be new; Looker Studio, GA4, and SQL are not. Easy to reach either way.

*That is the shape of
25 skills and **15**
connections, and it is
not prompting.*

Best,

Emilio Nunez-Garcia
